and

Preliminary Determination for an Air Quality Permit for

Enterprise Field Services, LLC

Enterprise Field Services, LLC, PO Box 4324, Houston, TX has submitted an air quality permit application to the New Mexico Environment Department (NMED) for an air quality permit to modify the Largo Compressor Station facility. The application file has been assigned Permit No. 1591-M4 and TEMPO Agency Interest ID No. 971. The exact location of the facility is at latitude 36 deg, 29 min, 7.42 sec and longitude -107 deg, 33 min, 25.91 sec. To aid in locating this facility, the approximate location is 20 miles south of Navajo City on CR 379 in Rio Arriba County.

The proposed modification will consist of correcting the emission factors used to calculate SO₂ emissions, the addition of malfunction emissions, changes to the SSM emissions, and a correction to the short-term flare emissions associated with pigging events.

Total air pollutant emissions to the atmosphere are estimated to be approximately 46 tons per year of nitrogen oxides, measured as nitrogen dioxide (NO_x); 84 tons per year of carbon monoxide (CO); 99.4 tons per year of volatile organic compounds (VOC); 4 tons per year of sulfur dioxide (SO₂); 3 tons per year of total suspended particulates (TSP); 3 tons per year of particulate matter less than 10 microns (PM₁₀); 3 tons per year of particulate matter less than 2.5 microns (PM_{2.5}); and no more than 15 tons per year of Total Hazardous Air Pollutants (Total HAP). The facility is a minor (< 100,000 tpy CO₂e) source of green house gas emissions. These emission estimates could change slightly during the course of the Department's review of the application.

The NMED has conducted a preliminary review of the information submitted with the permit application. The preliminary review and dispersion modeling analysis indicates that the facility's air emissions will meet the ambient air quality standards for NO_x, CO, SO₂, TSP, PM₁₀ and PM_{2.5}. A full review will evaluate the estimated emission rates and the air quality dispersion modeling analysis to determine compliance with ambient air standards.

Volatile organic compounds (VOCs) are also increasing due to this modification. VOCs are a pre-cursor to ozone. Pre-construction air dispersion modeling is not required for VOCs and ozone. To determine compliance with national ambient air quality standards, NMED monitors ambient ozone concentrations. A full review will evaluate the estimated emission rates and determine compliance with air quality regulations.

Based on the applicant's analysis, a preliminary determination is that this facility will comply with the requirements of Title 20, New Mexico Administrative Code (NMAC), Chapter 2, Parts 3, 61, 72, 73, and 75; 40 CFR 50; 40 CFR 63 Subparts A and ZZZZ; and the New Mexico Air Quality Control Act. Therefore, the preliminary intent of NMED is to issue the air quality permit on or before February 21, 2012. This source is a minor source according to 20.2.74 NMAC, PSD.

To ensure compliance with state and federal air regulations, the permit is expected to include conditions that limit the emissions, hours of operation, and production rate, and conditions that will require record keeping and reporting to the Department.

The permit application is available for review in electronic or hard copy at the Air Quality Bureau Office, 1301 Siler Road, Building B, Santa Fe, New Mexico. To arrange viewing of this application, contact Teri Waldron at 505-476-4355 or teri.waldron@state.nm.us. The permit application is also available at the NMED Farmington Office, located at 3400 Messina Dr., Suite 5000, Farmington, NM 87402 for public review.

All interested persons have thirty (30) days from the date this notice is published, to notify the Department in writing of their interest in the permit application. The written comments should refer to the company name, site name and Permit No. (or send a copy of this notice along with your comments). The written comments shall state the nature of the issues raised and how it relates to the requirements of applicable state and federal air quality regulations and the Clean Air Act. The written comments should be mailed to Norma Perez, New Mexico Environment Dept., Air Quality Bureau, Permit Section, 1301 Siler Road, Building B, Santa Fe, New Mexico 87507-3113.

The Department will notify all persons, who have provided written comments, as to when and where the Department's analysis may be reviewed. Although all written comments will be made part of the public record, any person who does not express interest in writing prior to the end of this first thirty (30) day period will not receive such notification.

If the Department receives written public comment prior to the end of the Department's thirty (30) day public notice, the Department's analysis will be made available for review for thirty (30) days at the NMED district or field office nearest to the source before the permit will be issued. Written comments on the analysis or permit application may be submitted to the Department during this second thirty (30) day period or at any time before the permit is issued or denied.

Questions or comments not intended to be part of the public record can be directed to Norma Perez at 505-476-5564. General information about air quality and the permitting process can be found at the Air Quality Bureau's web site. The regulation dealing with public participation in the permit review process is 20.2.72.206 NMAC. This regulation can be found in the "Permits" section of this web site.
